

Dataset Links

All free. Aswath Damodaran's industry datasets share one 94-industry key and live at /pc/datasets/<stem>.xls — the datafile HTML pages mislabel their download links, so these point at the canonical files the pipeline actually uses. Click a blue label; raw URL beneath for copy-paste.

■ CORE — THE THREE THESIS DATASETS (DAMODARAN, NYU STERN)

1 · Operating & Net Margins

Reported *and* R&D/lease-adjusted operating margins + R&D/Sales, SBC/Sales — the distortion is measured here.

[margin.xls \(data\)](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/margin.xls>

[margin.html \(definitions\)](#)

https://pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/margin.html

2 · R&D Expenditures

R&D intensity, 5-yr R&D, and Damodaran's **capitalized-R&D estimate** (never paired with the adjusted margin — that is his identity).

[R&D.xls \(data\)](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/R&D.xls>

[R&D.html \(definitions\)](#)

https://pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/R&D.html

⚠ The R&D.html "download" link mistakenly points to roe.xls — use the direct R&D.xls URL above.

3 · Financing Flows by Sector

Dividends, buybacks, equity issuance, debt raised/repaid — the funding & payout signature.

[finflows.xls \(data\)](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/finflows.xls>

[finflows.html \(definitions\)](#)

https://pages.stern.nyu.edu/~adamodar/New_Home_Page/datafile/finflows.html

⚠ Net Equity Change = Issuance – Buybacks (dividends NOT subtracted) — verified against the data; the file's own note is wrong.

■ VALUATION PAYOFF — DOES THE MARKET PRICE THE ADJUSTED MARGIN?

4 · Price/Sales & EV/Sales · PE & PEG · Dividends vs FCFE

The market-outcome variables the thesis regresses on (EV/Sales, P/E), plus payout capacity.

[psdata.xls — Price/Sales & EV/Sales](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/psdata.xls>

[pedata.xls — PE, PEG, expected growth](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/pedata.xls>

[divfcfe.xls — Dividends vs FCFE](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/divfcfe.xls>

■ INDEX, ARCHIVES & SIBLING FACTS (SAME 94-INDUSTRY KEY)

5 · Data index & the multi-year panel

The catalog of ~30 industry datasets, and the archive that turns a single January snapshot into a panel.

[datacurrent.html — full dataset index](#)

https://pages.stern.nyu.edu/~adamodar/New_Home_Page/datacurrent.html

[dataarchived.html — prior vintages \(1/99 → 1/25\)](#)

https://pages.stern.nyu.edu/~adamodar/New_Home_Page/dataarchived.html

› Archive pattern: /pc/archives/<stem><YY>.xls (e.g. margin23.xls). Files at /pc/datasets/ are overwritten each January — pin + hash per vintage.

6 · Optional enrichment (extensions)

Value-creation, risk, reinvestment siblings + a firm-level drill-down to show within-industry dispersion.

[EVA.xls](#) · [roe.xls](#) · [wacc.xls](#) · [capex.xls](#) · [betas.xls \(siblings\)](#)

<https://pages.stern.nyu.edu/~adamodar/pc/datasets/<stem>.xls>

[SEC EDGAR XBRL frames — within-industry dispersion](#)

<https://data.sec.gov/api/xbrl/frames/us-gaap/<Concept>/USD/CY<Year>.json>

[FRED — macro regime for financing flows \(panel\)](#)

<https://fred.stlouisfed.org/docs/api/fred/>

⚠ GICS is proprietary (no free crosswalk) — bridge to EDGAR via each filer's **SIC** instead.
